# Important Safety Instructions

Before using your Stewart Audio Inc. Power Amplifier, please read this **Owner's Manual** carefully to ensure optimum trouble-free performance.

**WARNING: TO REDUCE THE RISK OF ELECTRICAL SHOCK, DO NOT EXPOSE THIS AMPLIFIER TO RAIN OR MOISTURE. DANGEROUS HIGH VOLTAGES ARE PRESENT INSIDE THE ENCLOSURE. DO NOT OPEN THE CABINET. REFER SERVICING TO QUALIFIED PERSONNEL ONLY.**

The lighting bolt within arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of un-insulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electrical shock to person.

The exclamation point within an equilateral triangle, is intended to alert the user to the presence of important operating and maintenance (servicing) instruction in the literature accompanying the appliance.

## Important Safety Instruction – Please Read Prior to Product Installation.

1. Installation should be performed by a trained and licensed professional to insure safe and lasting operation.
2. All of the safety and operating instructions should be read before the amplifier is installed or operated. Retain these instructions for future reference. All instructions should be followed; all warnings on the amplifier and in the operating instructions should be adhered to.

3. The amplifier should be situated so that its location and position does not interfere with its proper ventilation. For example, the amplifier must not be placed on a rug, bed, sofa or similar surface that impedes airflow across the chassis. Airflow around the unit should be unobstructed.
4. This amplifier should not be used near water, for example, near a bathtub, in a wet basement, near a swimming pool, etc. This amplifier is intended to be operated in a controlled indoor environment.
5. Do not place the amplifier near heat sources such as radiators, heat registers, stoves, or other appliances that produce heat.
6. The amplifier's power supply should only be connected to 120 VAC, 60 Hz power source. Do not defeat the ground or polarization of the power plug.
7. Route power cord and other cables so that they are not likely to be walked on, tripped over or stressed. Pay particular attention to condition of cords and cables at plugs and at the point where they exit the amplifier. To prevent risk of fire or injury, damaged cords and cables should be replaced immediately.
8. Clean the amplifier with a clean, damp cloth. Do not use solvents or abrasive cleaners. Never pour any liquid on the amplifier.
9. When left unused for a long period of time, the power cord should be unplugged from the outlet.
10. Damaged Amplifiers requiring service should be repaired by a qualified service technician when:
  - a. The power cord or AC plug has been damaged.
  - b. Objects have fallen, or liquid has spilled into the unit.
  - c. The amplifier has been exposed to rain or other moisture.
  - d. The amplifier does not appear to operate normally or exhibits a marked change in performance.
  - e. The amplifier has been dropped or the enclosure damaged.
11. The user should not attempt to service the amplifier beyond that described in the operating instructions. All other servicing should be referred to qualified service personnel.

# 1 Welcome

Congratulations on the purchase of your new Stewart Audio CVA50-1 Priority PA power amplifier. This amplifier has been designed and built to provide you with years of high-quality audio performance and trouble-free operation. If after reading this manual you should have any questions concerning amplifier installation and operation, please contact your Authorized Stewart Dealer, or you may contact us directly using the contact information provided on the back of this manual.

## 1.1 Features

Your Stewart Audio CVA50-1 Priority PA amplifier is the result of years of experience in the design and manufacture of quality amplifiers. As such it provides a combination of performance and operational benefits that simply cannot be found in conventional amplifiers.

- Sub Compact 1/3 rack package
- Constant voltage amplifier (70.7V / 100V)
- Adjustable ducking of local inputs
- Microphone input with adjustable pre-gain
- Remote volume control
- External inline power supply
- Made in the USA

## 1.2 Using this Manual

In order to obtain maximum performance from your CVA50-1 Priority PA Amplifier, please take time to read this brief owner's manual and carefully follow the guidelines for connection and operation.

This manual provides you with the information necessary to safely install and operate your new CVA50-1 Priority PA amplifier in the most common scenarios. If you find yourself requiring additional assistance, please feel free to contact your Authorized Dealer, or you may contact us directly using the contact information provided on the back of this manual.

## 2 Setup

### 2.1 Setup Precautions

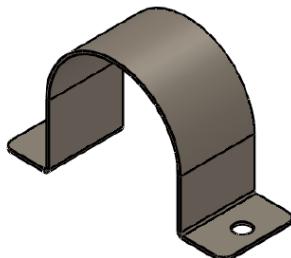

**CAUTION:** Before installing your amplifier, make sure that you have read the Important Safety Precautions at the beginning of this manual.

### 2.2 Amplifier Installation

The CVA50-1 Priority PA incorporates a number of different mounting options in order to fit your installation needs.

#### 2.2.1 Pole-Mount Installation

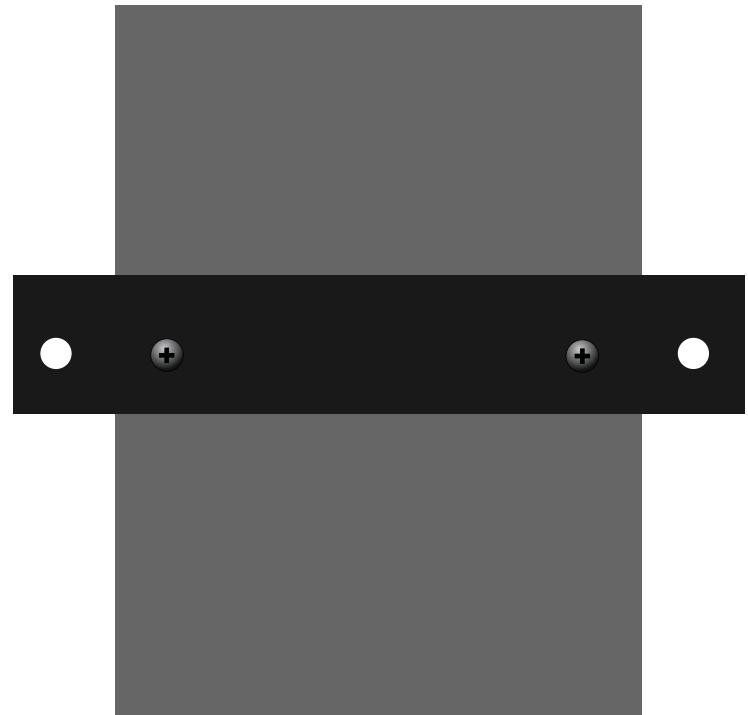

The CVA50-1 Priority PA amplifier casing has mount holes on both the top as well as the side of the unit which can be used with the AV-Pole bracket available from Stewart Audio. Two screws are included in the kit which will affix the bracket to the top or side of the unit.

Part Number: AV-Pole

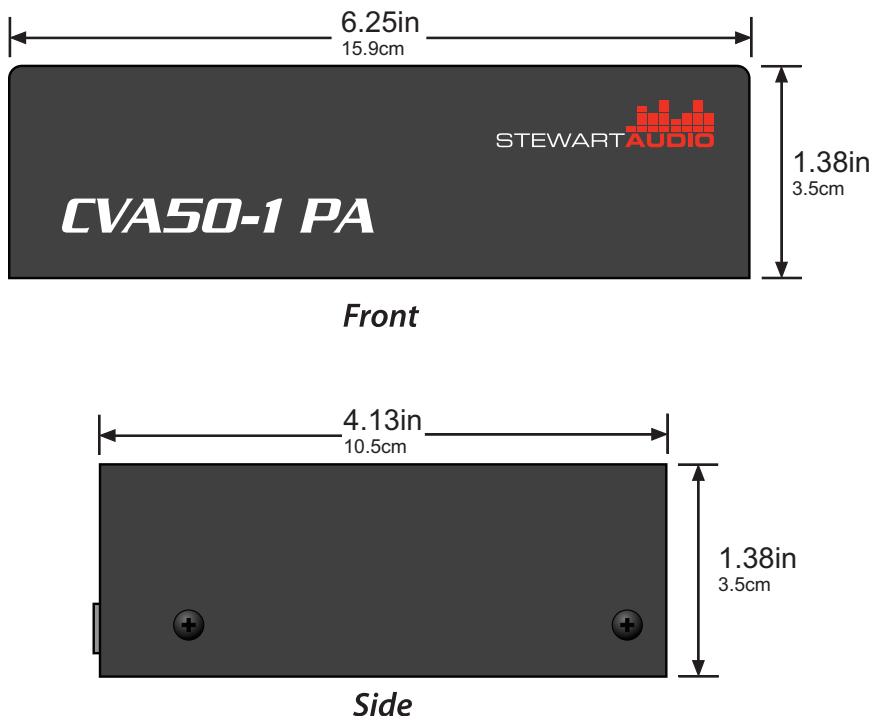

#### 2.2.1 Universal-Mount Installation

The CVA50-1 Priority PA also has a universal bracket available which allows the unit to be mounted against a wall or under a table. Two screws are included in the kit which will affix the bracket to the top or the side of the unit. Once this is done, two holes are available for mounting the unit where desired.

**CAUTION:** Use only the screws provided in mounting brackets to the amplifier. Do not over-tighten.

## 2.2.3 Product Dimensions

## 2.3 Proper Cooling Considerations

Because CVA50-1 Priority PA amplifiers regulate their temperature using convection cooling and no fans, the amplifiers must be given adequate space to allow for proper airflow. Do not stack the amplifiers on top of each other or mount it in a way that other equipment will block airflow along the surfaces of the case.

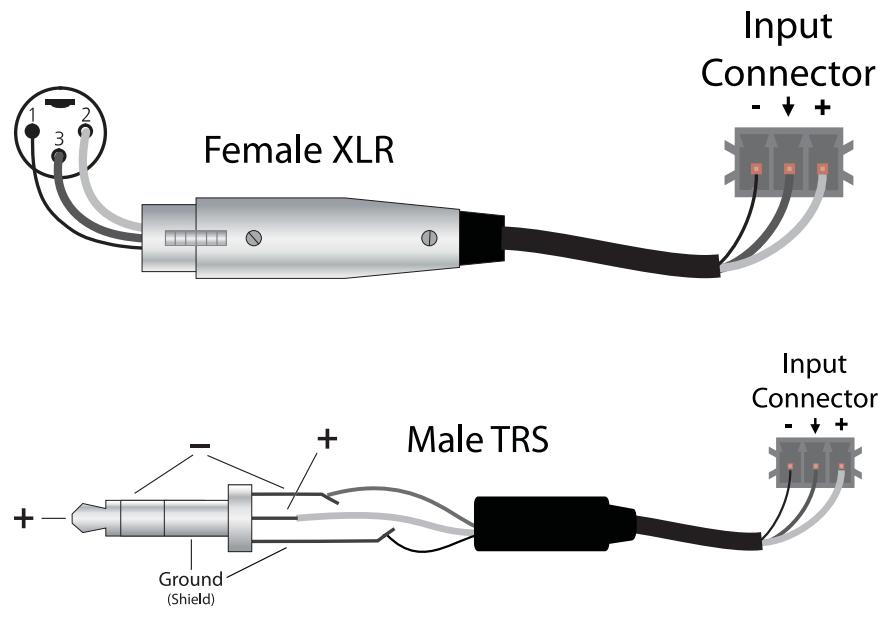

**CAUTION:** Inadequate airflow to the amplifier can cause the amplifier to overheat and potentially become damaged in the process. Be sure to provide plenty of air space to allow for convection cooling.

## 2.4 Input Connections

Your CVA50-1 Priority PA amplifier is provided with a 3-pin Euro Block connector for its input connection. This connector will accept both balanced or unbalanced connections, however some modifications must be made for an unbalanced connection. See the next two sections for instructions on connecting your amplifier to its input source.

### 2.4.1 Balanced Input Connections

When using a balanced input source and connector, you must ensure that the hot, cold, and ground pins of the connector are matched up to the +, -, and ground pins of the CVA50-1 Priority PA Euro Block connector respectively. Diagrams have been provided for standard XLR and TRS connectors. Please refer to the manual of your input source in case it does not follow the standard pin-out.

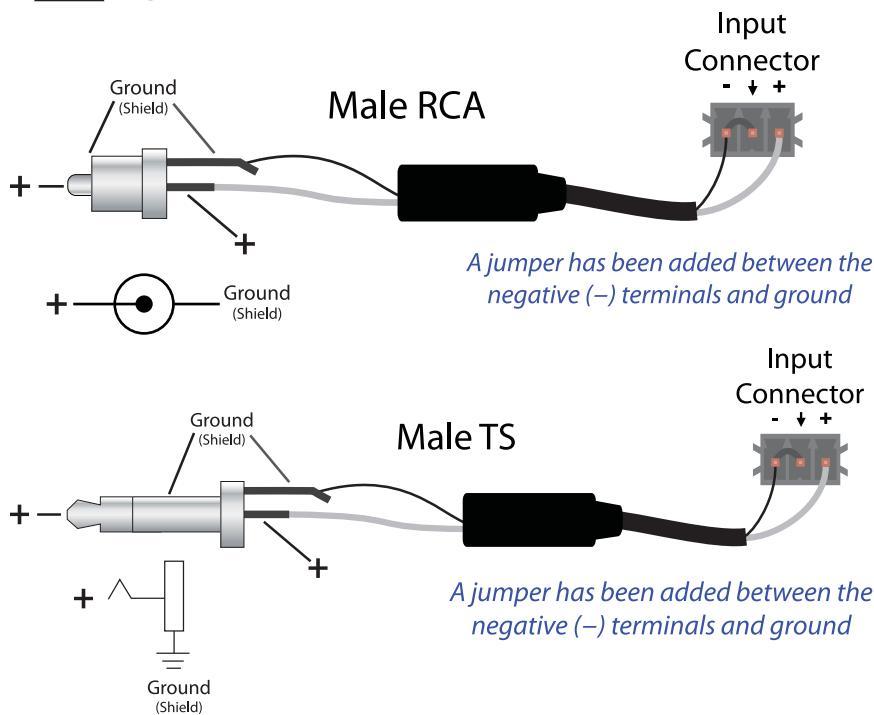

**NOTE:** The CVA50-1 Priority PA amplifiers does not accept TRS inputs wired for a stereo source. TRS inputs should only be used for balanced mono inputs.

## 2.4.2 Unbalanced Input Connections

When using an unbalanced input source and connector, a jumper must be added between the negative (-) terminals and the ground terminals. Once this has been done, the unbalanced source can be connected to the positive (+) and ground terminals. Please refer to the manual of your input source in case it does not follow the standard pin-out. For your convenience, pre-wired connectors are available for purchase, see the next page for details.

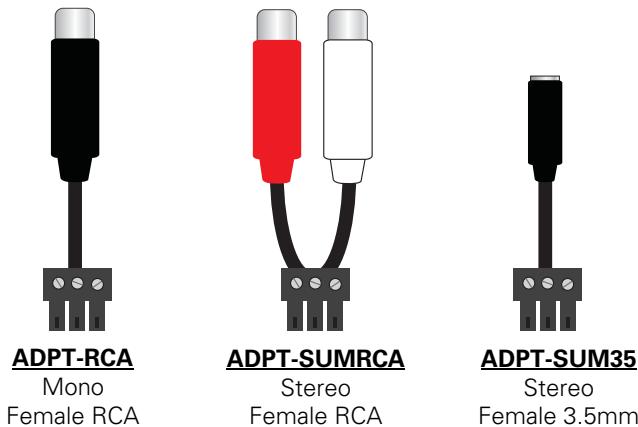

**NOTE: A jumper is required for connecting an unbalanced input.**

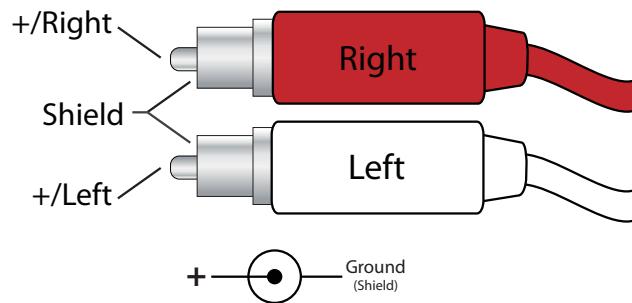

**NOTE: The CVA50-1 Priority PA amplifiers does not accept stereo inputs. Either one side must be selected from the stereo source or an overload-protected Y-cable must be used to sum them to mono. It is highly recommended that you purchase the pre-wired connectors mentioned on the next page. Damage to source equipment can result from**

Pre-wired unbalanced connectors are available for purchase from Stewart Audio. These will allow for a quicker installation with less room for error when connecting the CVA50-1 Priority PA amplifier to an unbalanced source. The summing adapters will properly sum a stereo source for use with the mono input on the rear of the amplifier without causing sound cancellation. Part numbers are found below the diagrams.

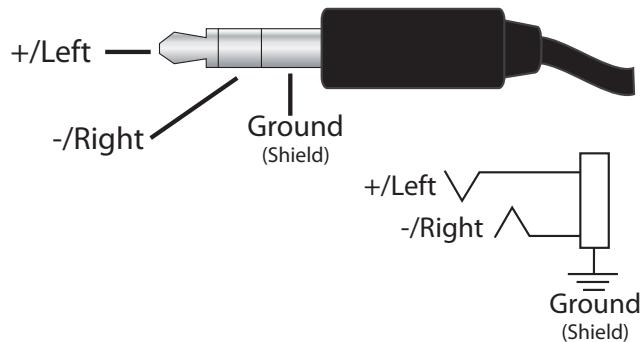

## 2.4.3 RCA Input

The first input channel is a stereo RCA jack which is then summed to mono before the final output. Refer to the diagram below for wiring directions.

### 2.4.3 Stereo 3.5mm

The second input channel is a stereo RCA jack which is then summed to mono before the final output. Refer to the diagram below for wiring directions.

### 2.4.4 25V PA Euro Block

The third input channel is a Euro Block connector which can be wired to any unbalanced input. Should you be wiring up a stereo source, use both the left and right pins of the connector. A mono source will only require the use of the ground and left pins.

### 2.5 Output Connections

Because of the differences in the way that constant-voltage amplifiers work as opposed to a typical 8-ohm setup, the wiring procedure and the gauge of wire used is very different.

Constant voltage systems and speakers use a smaller current flow than the typical 8ohm systems and thus can use a higher gauge (thinner diameter) wire. Please refer to the following chart to choose the appropriate wire gauge for your installation.

Distance	Wire Gauge
Up to 500ft	22 AWG
500 to 1000 ft.	20 AWG
Over 1000ft	18 AWG

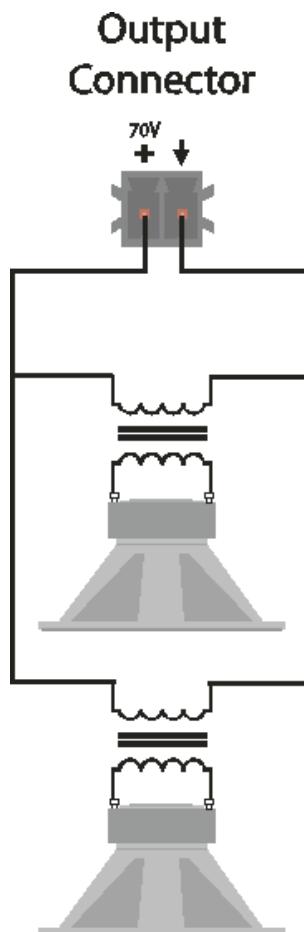

Speaker leads connect by means of removable Euro Block connectors supplied with the unit. Strip speaker leads 1/4" and insert leads into connector observing proper polarity. With a small, flat-blade screwdriver, tighten the screw until the leads are held securely in place. Inspect for possible shorts or broken wires.

## 2.5.1 Constant Voltage

The Euro Block connector on the rear of the amplifier is capable of supplying output at 70V.

## 2.5.2 Wiring Example

The diagram below is a typical wiring setup for two speakers with out-board step-down transformers wired in parallel to the 70V output option of a CVA50-1 Priority PA amplifier.

# 3 Operation

## 3.1 Operating Precautions

1. Before use, your amplifier must be configured for proper operation, including input and output wiring hookup. Improper wiring can result in damage to equipment or potentially harm to the operator. Consult section 2 for setup instructions.
2. Tampering with the circuitry, or making unauthorized changes is not only dangerous but may also violate local regulations.
3. Use care when making connections between the amplifier and the input or output equipment. Using equipment that is not capable of handling the output wattage may lead to permanent damage.

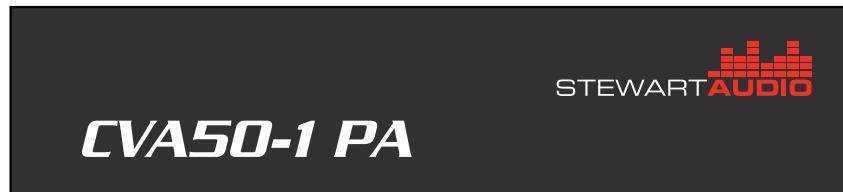

**NOTE: Stewart Audio will not be held responsible for damage to your CVA50-1 Priority PA amplifier or connected equipment if the instructions in this manual are not followed.**

**NOTE: For additional operating precautions, please refer to "Important Safety Instructions" located on Page 2.**

## 3.2 Controls, Indicators, and Connectors

### 3.2.1 Indicators

The CVA50-1 Priority PA amplifiers have three rear panel LEDs to indicate the status of the amplifier. The blue LED, labeled "ON", will be lit when the unit is not in sleep mode. The green LED, labeled "SIG", will light when an audio signal is present on the audio input. When the unit is operating with both green and blue LEDs lit and the audio input signal goes away or is removed, the green "SIG" LED will go out and the unit will continue to operate with the blue LED on for approximately 5 minutes before going into sleep mode. When signal is present and output is going to the speakers the red LED, labeled "Clip", will light when the input signal is too hot. The "LEVEL" control must be adjusted until the CLIP LED goes out for undistorted sound amplification.

### 3.2.2 Controls

The CVA50-1 Priority PA controls are located on the rear of the unit. There is no power switch so the amplifier will power up into a sleep state when power is first applied. The CVA50-1 Priority PA Signal Sense Technology (SST™) will power up the amplifier from sleep when a signal is detected. After 5 minutes without an input signal the amplifier will go into sleep mode.

The rear panel contains two volume knobs. The amplifier is set to run off of a line-level source and the level should be adjusted for optimum performance. To adjust this knob, you will need a small flat-head screwdriver. While a typical program source level is present, spin the rotary knob as far clockwise as you can without hearing distortion or without the "Clip" indicator illuminating. If the signal is distorting and the knob is all the way counter-clockwise, adjust the gain down at the source level.

The "Mic Gain" setting will adjust for the sensitivity of the microphone by different manufactures beyond what the volume control offers. If the microphone is generally too loud, select the "High" setting by sliding the switch to the right. If the microphone is generally too quiet, select the "Low" setting by sliding the switch left.

### 3.2.3 Remote Volume Control

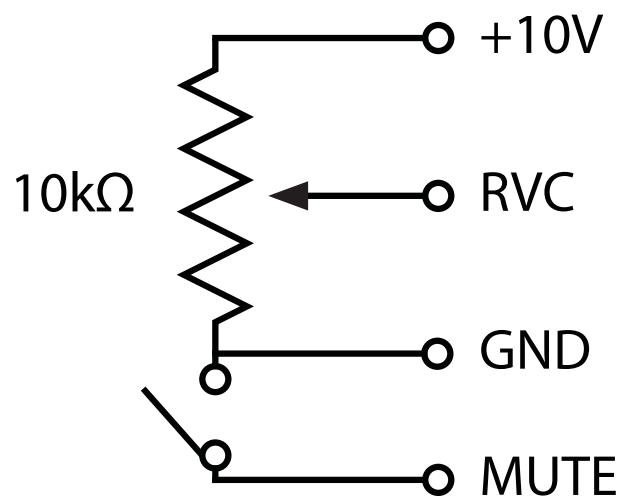

CVA50-1 Priority PA amplifiers can have their volume remotely controlled (or muted) via the Euro Block input on the rear of the amplifier. The remote volume control allows the units volume to be controlled through the use of an external potentiometer which can be located wherever convenient for the user. Remote muting is also useful for fire-alarm situations in which all unnecessary sound must be silenced.

**NOTE: If the remote volume control connector is utilized, it will override the volume knob on the rear of the unit.**

In order to remotely control the volume of the unit, a 10k-ohm potentiometer should be placed between the +10V pin and the GND (Ground) pin on the rear of the unit with its wiper on the RVC pin. The volume will be determined by the selected resistance on the potentiometer, the greater the resistance the louder the volume.

The amplifier can be remotely muted by making a connection between the GND pin and the MUTE pin. No power should be applied to these pins, simply a contact connection.

### 3.2.4 PA Ducking

The CVA50-1 Priority PA includes a ducking feature which allows the PA channel to talk over the other channels. When a 25V Signal is detected on PA line, it will lower the other channels by a set amount. Both the sound threshold to activate the ducking (Ducking Sensitivity) and the amount the other channels are lowered (Ducking) are configurable via recessed knobs on the front panel.

## 4 Troubleshooting

### Problem: Power indicator does not turn on.

**Procedure:** Check that the amplifier is plugged into a live outlet. After you have ensured that it is not a power issue, disconnect any speakers. If the amplifier turns on after a few seconds delay, then the problem is in the output connection. Check wiring and speakers for short circuits.

### Problem: No output on one or both channels; Power indicator is lit.

**Procedure:** Check that level controls are not turned down. Check that input and output connections are secure. Refer to **section 2.5** to ensure that you have properly connected your speakers. Ensure signal present LED is flashing to denote a signal. If there is no signal detected check signal source and that level controls are set high enough.

### Problem: Microphone level is too low even after adjusting level knob

**Procedure:** Refer to **section 3.2.2** to adjust the gain switch on the rear of the amplifier.

### Problem: Channels 2-4 cut out while speaking into the microphone

**Procedure:** This is part of an intended feature called ducking. Refer to **section 3.2.4** to adjust this to a more acceptable level.

### Problem: Amplifier overheats and/or shuts off.

**Procedure:** Review **section 2.3** on proper cooling procedures. Check the signal lights on the front of the amplifier to see if the signal is overdriving (the Clip light flashes red frequently). Overdriving the amplifier for extended periods of time can cause a thermal shutdown.

## 4 Troubleshooting (Cont.)

### Problem: Output sound is distorted or crackling.

**Procedure:** Check all cables for damage or loose connections and reduce the gain on the input signal at the mixer or preamp level. Replace the cables and loudspeakers temporarily to see if this resolves the problem. If problem still exists, contact your Authorized Dealer for service.

# 5 Technical Specifications

## Maximum Output 30Hz - 20kHz

CVA50-1 Priority PA	50W @ 70V
<b>Frequency Response (+0, -3 dB)</b>	100Hz—20kHz
<b>Power Bandwidth +/- 3dB</b>	80Hz-30kHz
<b>THD+N</b>	<0.1%

# 6 Warranty Information

## 6.1 Warranty Summary

All Stewart Audio amplifiers and accessories, unless excluded in this summary, are covered by a 3-year limited warranty on parts and labor from the date of purchase. In order to be eligible for warranty repairs, the amplifiers and accessories must have been purchased through an authorized Stewart Audio dealer and submitted by the original purchaser. This warranty is only valid in the country in which the amplifier was purchased.

### 6.1.1 Eligibility Requirements.

Stewart Audio warrants against all malfunctions which come as a result of component or manufacturer defect. The amplifier is also covered from all failures which arise during the warranty period (3 years from date of purchase) that are not a result of misuse. The following actions will void your warranty:

- The power cord or AC plug has been damaged through misuse.
- The amplifier has been exposed to moisture or extreme temperatures.
- The amplifier has been dropped, items have been dropped on the amplifier, or the enclosure has been damaged.
- The amplifier has been opened by the operator.
- The amplifier was improperly packaged when sending to the factory for repair, resulting in damage.
- Any of the precautions or instructions found in this manual were not followed.

Damages resulting to the amplifier which are not covered under this warranty can be factory-repaired at cost to the customer. Use the contact information below to initiate the repair process.

## 6.2 Return Procedure

This section includes the return procedures which must be followed in order to prevent processing delay or cost to the customer. Please read the entire section before contacting Stewart Audio for returns.

## **6.2.1 Return Authorization Number**

All returns to the factory for service must be accompanied by a Return Authorization (RA) number. One can be obtained by contacting Stewart Audio at (209) 588-8111 or via e-mail at support@stewartaudio.com.

**NOTE: Any defective products received without an RA number will be returned to sender at their expense.**

If Stewart Audio is unable to contact the sender in 14 days, the merchandise will be considered scrap and may be disposed of.

## **6.2.2 Shipment Instructions**

If Stewart Audio requests that you ship the defective product back to their service center, please refer to the guide below. To ensure prompt warranty service, be sure to follow all instructions.

1. Return Authorization (RA) is required for product being sent to the factory for service.
2. See packing instructions in **section 6.2.3**.
3. Ship the defective product using a method which provides for order tracking or order confirmation. The service center is located at the following address:

Stewart Audio  
14397 Cuesta Court Suite D1  
Sonora, CA 95370

4. Use a bold black marker and write the RA number on three sides of the box.
5. Record the RMA number for future reference. The RA number can be used to check the repair status.

## **6.2.3 Packaging Instructions**

Should Stewart Audio request that you ship your product to their service center, these instructions must be followed in order to ensure safe delivery. If they are not followed, Stewart Audio assumes no responsibility for damaged goods and/or accessories that are sent with your unit.

## **6.2.3 Packaging Instructions (cont.)**

1. Please write the RA number on three sides of the box. Include the Stewart Audio RA number inside the box and a brief description of the problem.
2. Do not ship any accessories (manuals, cords, hardware, etc.) with your unit. These items are not needed to service your product. Stewart Audio will not be held responsible for these items if they are returned with the amplifiers.
3. When shipping your amplifier, it is important that it has adequate protection. We recommend you use the original packing material when returning the product for repair. If you do not have the original box, see number 4.
4. If you provide your own shipping pack, the minimum recommended requirements for materials are as follows:
  - a. 275 P.S.I. burst test, Double-Wall carton that allows for 2-inch solid Styrofoam on all six sides of unit or 3 inches of plastic bubble wrap on all six sides of unit.
  - b. Securely seal the package with an adequate carton sealing tape.
  - c. Do not use light boxes or "peanuts".

**NOTE: Damage caused by poor packaging will not be covered under warranty.**

## **6.2.4 Estimate Approval**

An estimate for all non-warranty repairs will be provided to the customer once the unit has been shipped to the factory. The customer is responsible to approve this estimate within 7 days. If the repairs are not approved within 14 days, Stewart Audio reserves the right to consider the unit scrap and may discard it.

## **6.2.5 Payment of Non-Warranty Repairs**

Payment for non-warranty repairs must be submitted to Stewart Audio before the product will be returned to the customer.

## 7 Accessories

The following accessories are available from Stewart Audio for your amplifier.

All part numbers shown are Stewart Audio Part Numbers.

### **Mounting Brackets**

- AV-POLE Pole-mount bracket for AV Series amplifiers  
AV-BRACKET Universal mounting bracket for AV Series amplifiers

### **Connection Adapters**

- ADPT-RCA Mono Female RCA to male Euroblock.  
ADPT-SUMRCA Stereo Female RCA to male Euroblock.  
ADPT-SUM35 Stereo Female 3.5mm to male Euroblock

### **Wall Plates**

- WP-RVC-B Wallplate with 10k potentiometer and knob for remote volume control (Black)  
WP-RVC-A Wallplate with 10k potentiometer and knob for remote volume control (Aluminum)

## 8 Notes

### **For Your Record**

In the spaces provided below, record the model and serial number located at the rear of your amplifier.
